

GAME STORE

REQUIREMENTS STATEMENT

PROBLEM STATEMENT

I run "GameVault" a physical video game store in Faisalabad, been open 6 years. I sell new/used games (PS5, Xbox, PC, Switch), consoles, and accessories. Foot traffic has dropped 40% since online stores took over. I have 3 employees; one is decent with a computer. I want to go online but I don't want to just "have a website" I want a real digital storefront that can eventually replace my shop as the main revenue source.

What I need, in my own words:

1. Customers should be able to browse games by platform, genre, price — and see if it's new or used (used games need condition notes: Like New, Good, Fair).
2. I have inventory sitting in my shop right now. I need to upload it — ideally in bulk, not one by one, I have like 800 items.
3. Customers pay online (cards, and we need JazzCash/EasyPaisa since that's what people in Pakistan use) — but some customers still want "reserve online, pay & pickup in store." Both flows matter to me.
4. I need to know how much stock I always have, and it should update automatically when someone buys it. I don't want to oversell a used game I only have one copy of.
5. Customers should be able to leave reviews/ratings on games and on their overall order experience.
6. I want customers to get order confirmation and shipping update emails/SMS — I don't want them calling my shop asking, "where's my order."
7. I need an admin dashboard where I (or my employee) can add/edit/remove products, see orders, mark them shipped, and see basic sales numbers — I'm not techy, so it needs to be simple.
8. Some games are pre-orders — customers should be able to pre-order upcoming releases and get charged/notified when they're available.
9. I want a wishlist feature — I've seen how it drives people to come back.
10. Security matters — I don't want a repeat of what happened to [a competitor] who got their customer card data leaked. Whatever payment stuff we do needs to be properly secured, and I don't want to store raw card numbers myself.
11. My shop gets busy on weekends — the site needs to handle traffic spikes without crashing, especially during game launch days (like when GTA 6 drops, I expect insane traffic).

12. I eventually want to expand — sell in other cities, maybe other countries. So don't build something that only works for me right now.
13. I want people to find my store on Google when they search "buy PS5 games Faisalabad" or similar — this needs to be discoverable, not just functional.
14. My employee needs role-based access — I don't want the part-timer able to delete products or see revenue reports, only I should see that.

Functional Requirements (FR)

ID	Requirement	Source
FR-01	Browse/filter catalog by platform, genre, price, condition (New/Used)	Pt 1
FR-02	Used games carry condition metadata (Like New/Good/Fair)	Pt 1
FR-03	Bulk product upload (CSV/Excel import, ~800 SKUs)	Pt 2
FR-04	Checkout via Card + JazzCash + EasyPaisa	Pt 3
FR-05	Dual fulfillment: Home Delivery OR Reserve-Online-Pickup-In-Store	Pt 3
FR-06	Real-time inventory sync — stock decrements on order, blocks overselling single-copy used items	Pt 4
FR-07	Product reviews/ratings + separate order-experience reviews	Pt 5
FR-08	Automated order/shipping notifications (Email + SMS)	Pt 6
FR-09	Admin dashboard: CRUD products, order management, sales analytics	Pt 7
FR-10	Pre-order module: reserve unreleased titles, auto-charge/notify on release	Pt 8
FR-11	Wishlist (save-for-later, persists per user)	Pt 9
FR-12	Role-Based Access Control (Owner vs Employee permission tiers)	Pt 14

Non-Functional Requirements (NFR)

ID	Requirement	Category	Source
NFR-01	PCI-DSS aligned payment handling — no raw card storage	Security	Pt 10
NFR-02	Encrypted data at rest/transit (bcrypt for auth)	Security	Pt 10
NFR-03	Handle traffic spikes (launch-day surge, e.g. GTA 6) without downtime	Performance/Scalability	Pt 11
NFR-04	Horizontally scalable architecture — multi-city/multi-country ready	Scalability	Pt 12
NFR-05	SEO-optimized (SSR/meta tags, structured data for local search intent)	Discoverability	Pt 13
NFR-06	Admin UI usability — non-technical owner/staff must operate without training	Usability	Pt 7
NFR-07	Inventory consistency under concurrent orders (no race conditions on last-copy items)	Reliability	Pt 4
NFR-08	Notification delivery reliability (email/SMS queue, retry on failure)	Reliability	Pt 6
NFR-09	Mobile-responsive storefront (majority PK traffic is mobile)	Usability	Implied
NFR-10	Auditability — track who (owner/employee) made admin changes	Security	Pt 14
